Investment Committee

Managed by the Global Fixed Income Investment Committee, whose members' average tenure at Dodge & Cox is 22 years.

Investment Objective

The Global Bond Fund seeks a high rate of total return consistent with long-term preservation of capital.

Investment Approach¹

The Fund offers investors a highly selective, actively managed fund that complements core bond holdings by providing a diversified portfolio of carefully researched investments across global credit, currency, and interest rate markets over a long-term horizon. Generally, we:

- Invest with a total return mindset across a global investment universe that includes government and government-related obligations, mortgage- and asset-backed securities, corporate and municipal bonds, and other debt securities, from both developed and emerging markets.
- Build a diversified portfolio across several dimensions, including sector, country, currency and economic exposure.
- Select individual securities based on fundamental research and consider a variety of factors, including yield, credit quality, liquidity, covenants, call risk, duration, structure, and capital appreciation potential, as well as financially material environmental, social, and governance (ESG) issues.
- May employ various currency, interest rate, and credit-related derivatives, including forwards, futures, and swaps.

Share Classes

Risks

The yields and market values of the instruments in which the Fund invests may fluctuate. Accordingly, your investment may be worth more or less than its original cost. Debt securities are subject to interest rate risk, credit risk, and prepayment and call risk, all of which could have adverse effects on the value of the Fund. Investments in certain countries, particularly underdeveloped or developing countries, may be subject to heightened political and economic risks. The Fund's use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. Please read the [prospectus](#) for specific details regarding the Fund's risk profile.

- 1 Please see the Fund's Sustainable Finance Disclosures Regulation SFDR Disclosure available at [dodgeandcox.com](#)
- 2 Based on yield to maturity, which is the total rate of return anticipated for a bond if it is held to maturity, assuming all interest payments are made on schedule and the original principal amount is repaid.
- 3 The Fund may classify a company or issuer in a different country than the benchmark index. The Fund generally classifies a company or issuer based on the country of incorporation of the parent company, but may designate a different country in certain circumstances.
- 4 Dodge & Cox has voluntarily agreed to reimburse the Fund for all ordinary expenses to the extent necessary to limit aggregate annual ordinary expenses to 0.45% of the average daily net assets of each share class. Dodge & Cox may terminate or modify this agreement upon 30 days' notice to shareholders.
- 5 Distribution yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the current share price. The distribution yield is the same as the underlying yield. Investors may be subject to tax on their distributions.
- 6 Portfolio Turnover is calculated as the lesser of the portfolio purchases or sales divided by the average portfolio value for the period.
- 7 The Fund's total returns include dividends and interest income and reflect the deduction of expenses charged to the Fund. Index returns include dividends but, unlike Fund returns, do not reflect fees or expenses.
- 8 The Fund is actively managed and uses the benchmark index for performance comparison purposes only.
- 9 The data represents the USD Accumulating Share Class.
- 10 Standard Deviation measures the volatility of the Fund's returns. Higher Standard Deviation represents higher volatility.
- 11 Sharpe Ratio is a risk-adjusted measure that calculates excess performance with respect to the risk-free rate per unit of volatility over the time frame
- 12 Excludes currency and interest rate derivatives.
- 13 Net Cash & Other includes cash, short-term investments, unrealised gain (loss) on derivatives, receivables, and payables.
- 14 The credit quality distributions shown for the Fund and the Index are based on the middle of Moody's, S&P, and Fitch ratings, which is the methodology used by Bloomberg in constructing its indices. A rating of AAA is the highest possible credit rating, while a rating in the C's or D's is the lowest. If a security is rated by only two agencies, the lower of the two ratings is used. Please note the Fund applies the highest of Moody's, S&P, and Fitch ratings to determine compliance with the quality requirements stated in its prospectus. Calculating below investment grade securities on this basis may result in lower allocation figures. For consistency purposes, we use the S&P and Fitch rating categories. The credit quality of the investments in the portfolio does not apply to the stability or safety of the Fund or its shares.
- 15 Currency exposure reflects the value of the portfolio's investments based on the currencies in which they are issued, as well as the impact of any currency derivatives.
- 16 The Fund's portfolio holdings are subject to change without notice. The mention of specific securities is not a recommendation to buy, sell, or hold any particular security and is not indicative of Dodge & Cox's current or future trading activity.
- 17 Yield to Worst is a measure of the lowest possible yield that can be received on a bond that fully operates within the terms of its contract without defaulting.
- 18 Effective Duration is a measure of a portfolio's interest rate sensitivity, including the impact of derivatives used to adjust duration.

Figures represented by a dash are zero or have no associated data while figures represented by a zero may be rounded to zero.

Market values for debt securities include accrued interest.

The Bloomberg Global Aggregate Bond Index is a widely recognized, unmanaged index of multi-currency, investment-grade fixed income securities. Bloomberg calculates a USD hedged return by applying one-month forward rates to seek to eliminate the effect of non-USD exposures.
